HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Variability Management in Domain-Specific Languages

Domain-specific languages (DSLs) allow domain experts to express solutions directly in terms of relevant domain concepts and, for example, use generative mechanisms to transform DSL specifications into software artifacts (e.g. code, configuration files or documentation).

However, the development of DSLs is a challenging task due to the specialized knowledge it requires... Software Engineering techniques for Languages Development?

Software Languages Engineering
